## **List of Tables**

A. Household and Population Characteristics .....	9
1. Housing Units, Households and Household Population .....	9
2. Total Population, Average Household Size, Housing Vacancy Rates.....	10
3. Households by Vehicle Availability: County: 1960-2006.....	11
4. Household Vehicles Available by County: 1960-2006 .....	14
5. Compare Total Population for Large Cities and Counties: ACS, Census Bureau and California DOF Population Estimates: 2006.....	17
6. Compare Total Dwelling Units for Large Cities and Counties: ACS, Census Bureau and California DOF Population Estimates: 2006 .....	19
B. Race and Ethnic Characteristics .....	21
1. Hispanic or Latino Origin by Race: County: 2000-2006.....	21
2. Total Population by Race/Ethnicity: US, California, Bay Area: 2006 .....	22
3. Share of Total Population by Race/Ethnicity: US, California, Bay Area: 2006	23
4. Asian Alone Population by Asian Group: US, California, Bay Area: 2006 .....	24
5. Share of Asian Alone Pop by Asian Group: US, California, Bay Area: 2006 ..	25
C. Social/Economic Characteristics .....	26
1. School Enrollment by County of Residence: 2000-2006 .....	26
2. Age by School Enrollment by County of Residence: 2000-2006 .....	27
3. Households by Income Level by County of Residence: 2000-2006 .....	31
4. Mean and Median Household Income by County of Residence: 2000-2006....	32
5. Population by Ratio of Income to Poverty Level, by County of Residence: 2000-2006 .....	33
6. Housing Cost Burdened Households (> 30% of Income on Housing Costs): US, California, Bay Area: 1990, 2000-2006.....	34
7. Housing Cost Burdened Households (> 30% of Income on Housing Costs), by County of Residence: 2000-2006.....	35
8. Housing Cost Burden by County of Residence: 2000-2006 .....	36
D. Labor Force Characteristics.....	37
1. Employed Residents, Total Households, Workers/Household .....	37
2. Labor Force and Employment Status: US, California and the Bay Area: 2006	38
E. Journey-to-Work Characteristics .....	39
1. Means of Transportation to Work by County of Residence and County of Work: 2006.....	39
2. Means of Transportation to Work by County of Residence: 2000-2006.....	40
3. Means of Transportation to Work by County of Work: 2000-2006.....	41
4. Mean Travel Time to Work by Means of Transportation by County of Residence: 2000-2006 .....	42
5. Mean Travel Time to Work by Means of Transportation by County of Work: 2000-2006 .....	43
6. Travel Time to Work by County of Residence: 2000-2006.....	44
7. Travel Time to Work by County of Work: 2000-2006.....	45
8. Intra-County and Inter-County Commuters by County of Residence: 2000-2006	46

F. County and Place Rankings.....	47
1. Bay Area Counties, California and the United States: Racial/Ethnic Diversity, 2006.....	47
2. US Places Ranked by Racial/Ethnic Diversity, 2006.....	48
3. Bay Area Places Ranked by Racial/Ethnic Diversity, 2006 .....	49
4. US Places Ranked by Asian Share of Total Population, 2006.....	50
5. The Cost of Housing: United States, California, the Bay Area.....	51
6. Counties Ranked by Median Selected Monthly Ownership Costs.....	52
7. Counties Ranked by Median Selected Monthly Ownership Costs as a Percent of Income .....	53
8. Counties Ranked by Median Gross Rent.....	54
9. Counties Ranked by Median Gross Rent as a Percent of Income .....	55
10. Counties Ranked by Highest Transit-to-Work Shares.....	56
11. Counties Ranked by Highest Work-at-Home Shares .....	57
12. Counties Ranked by Highest Walk-to-Work Shares .....	58
13. Counties Ranked by Highest Bicycle-to-Work Shares.....	59
14. Counties Ranked by Lowest Drive Alone-to-Work Shares .....	60
15. Places Ranked by Highest Transit-to-Work Shares .....	61
16. Places Ranked by Highest Work-at-Home Shares .....	62
17. Places Ranked by Highest Walk-to-Work Shares.....	63
18. Places Ranked by Highest Bicycle-to-Work Shares.....	64
19. Places Ranked by Lowest Drive Alone-to-Work Shares .....	65
G. Socio-Economic Characteristics by Bay Area PUMA of Residence.....	66
1. Population & Household Characteristics by PUMA of Residence: 2006.....	66
2. Population by Race/Ethnicity by PUMA of Residence: 2006 .....	68
3. Housing Cost Burdened Households (> 30% of Income on Housing Costs) by PUMA of Residence: 2006 .....	70
4. Median Housing Costs by PUMA of Residence: 2006 .....	71
5. School Enrollment by PUMA of Residence: 2006.....	72
6. Linguistic Isolation & Limited English Proficiency by PUMA of Residence: 2006.....	73
7. Residential Mobility for Owner-Occupied Households by PUMA of Residence: 2006.....	74
8. Residential Mobility for Renter-Occupied Households by PUMA of Residence: 2006.....	75
9. Means of Transportation to Work by PUMA of Residence: 2006 .....	76
10. Share of Workers by Means of Transportation to Work by PUMA of Residence: 2006.....	77
11. Non-Home Workers by Travel Time to Work by PUMA of Residence: 2006.	78
12. Mean Travel Time to Work, and Intra-County Commuting by PUMA of Residence: 2006 .....	79
13. Household Vehicle Availability by PUMA of Residence: 2006.....	80

## **I. INTRODUCTION**

This Data Highlights Report provides selected tabular summaries of data from the American Community Survey (ACS) 2006. The focus of this summary is on ACS 2006 data, and on the comparison of ACS 2006 data with that from Census 2000, both data sources produced by the U.S. Census Bureau. For comparison purposes a few other sources are used, including data from 1960-1990 Censuses, the Census 2000 Supplementary Survey, the ACS 2005, the California Department of Finance (DOF), and the Federal State Cooperative Program for Population Estimates (FSCPE).

ACS 2006 data was released in three theme-based waves:

- § Wave 1: Basic Demographic data – released August 27, 2007
- § Wave 2: Detailed Demographic data – released September 12, 2007
- § Wave 3: Detailed Race/Ethnicity and Workplace data – released September 27, 2007

The geographic focus for this report is the nine-county San Francisco Bay Area, including the counties of Alameda, Contra Costa, Marin, Napa, San Francisco, San Mateo, Santa Clara, Solano and Sonoma. Data in this summary is reported at the region, county, and census-designated place level. In addition, part G tables are shown at the Public Use Microdata Area (PUMA)-level.

Tables in the data summary are organized by theme:

- A. Household and Population Characteristics
- B. Race and Ethnic Characteristics
- C. Social/Economic Characteristics
- D. Labor Force Characteristics
- E. Commute Characteristics
- F. County and Place Rankings
- G. Socio-Economic Characteristics by Bay Area PUMA of Residence

For more information on previous MTC census data summaries, visit the MTC web page:  
[http://www.mtc.ca.gov/maps\\_and\\_data/datamart/census/](http://www.mtc.ca.gov/maps_and_data/datamart/census/).

### **A. Background for the American Community Survey**

The Census Bureau has replaced the decennial 1-in-6 “long form” questionnaire with the yearly American Community Survey (ACS). Just like the long form, the ACS provides estimates of household and person characteristics, such as population, household income, employment, disability, and other topics. Unlike the decennial long form, however, the ACS provides data annually.

The yearly ACS will eliminate the need for a decennial long form in the 2010 census. Advantages of the yearly ACS over the long form include more timely information, with annual updates of sampled data. Increased sampling options and flexibility in design and content, a better trained full-time enumerator staff (as opposed to temporary staff hired once every 10 years), and faster data release are also improvements. Disadvantages of

the ACS include a smaller sample set than the long form and potentially less-accurate results due to larger sampling error.

The ACS has been in development since the mid 1990s, and began collecting its first pilot samples in 1996 in four test sites. The first year for a nationally-representative sample using ACS methodology was 2000, also called the Census 2000 Supplementary Survey (C2SS). Subsequent national samples are called the Census Supplementary Survey 2001, the ACS 2002, ACS 2003, and ACS 2004. ACS 2005 represents the first year of data release associated with full implementation of the ACS program.

### **B. Sample Methodology**

Full implementation for the ACS began in November 2004, sampling 250,000 addresses in the United States and Puerto Rico every month, totaling 3 million household samples per year. Sampling in 2005 was limited to only the household population.

The ACS 2006 expanded the sampling frame to include group quarters (for example, prisons, college dormitories, etc.)

Results for ACS 2006 data are available for geographic areas with a population greater than 65,000, including states, census-designated metropolitan areas and places, and for the first time in use with standard tabulations, Public Use Microdata Areas (PUMA). For geographic areas with a population of less than 65,000, it will take 3 to 5 years to accumulate enough samples to provide estimates similar to the quality of the census long form. Areas with a population 20,000 to 65,000 will use a 3-year average of data, while areas of less than 20,000 people will use a 5-year average. The first 3-year average data tabulations from the full ACS implementation (years 2005-2007) are scheduled for release in late 2008. The first 5-year average data from full implementation (years 2005-2009), including census tracts – the smallest geography published in ACS tabulations – are anticipated in late 2010. All areas will be updated every year thereafter.

A listing of the Bay Area geographies with ACS 2006 data is provided on the next page.

## **Bay Area Geographical Areas with American Community Survey 2006 Data**

### **Counties (9)**

Alameda  
Contra Costa  
Marin  
Napa  
San Francisco  
San Mateo  
Santa Clara  
Solano  
Sonoma

### **Places (25)**

Alameda  
Antioch  
Berkeley  
Concord  
Daly City  
Fairfield  
Fremont  
Hayward  
Livermore  
Mountain View  
Napa  
Oakland  
Pleasanton  
Redwood City  
Richmond  
San Francisco  
San Jose  
San Leandro  
San Mateo  
Santa Clara  
Santa Rosa  
Sunnyvale  
Union City  
Vacaville  
Vallejo

### **Urbanized Areas (11)**

Antioch  
Concord  
Fairfield  
Gilroy--Morgan Hill  
Livermore  
Napa  
San Francisco--Oakland  
San Jose  
Santa Rosa  
Vacaville  
Vallejo

### **Combined Statistical Area (1)**

San Jose-San Francisco-Oakland  
[11-county region including Santa Cruz  
and San Benito Counties]

### **Metropolitan Statistical Areas (5)**

Napa  
San Francisco-Oakland-Fremont  
San Jose-Sunnyvale-Santa Clara  
Santa Rosa-Petaluma  
Vallejo-Fairfield

### **Public Use Microdata Areas (54)**

All 54 Public Use Microdata Areas  
(5% PUMAs of 100,000+ population)

As described above, the sampling size for the ACS 2006 is smaller than that for Census 2000. While the Census 2000 long form utilized an average sampling rate of about 1 in 6 (approximately 17%) – with a higher rate in rural areas and a lower rate in urban areas – ACS 2005 sample sizes are considerably smaller.

**Share of ACS Completed Household Sample Interviews  
Bay Area Counties, 2000-2006**

County	2000	2001	2002	2003	2004	2005	2006
Alameda	0.35%	0.37%	0.34%	0.37%	0.37%	1.30%	1.35%
Contra Costa	0.38%	0.38%	0.34%	0.38%	0.37%	1.27%	1.28%
Marin	NA	NA	NA	NA	NA	1.30%	1.32%
Napa	NA	NA	NA	NA	NA	1.34%	1.39%
San Francisco	2.07%	1.70%	1.27%	1.36%	1.38%	1.25%	1.25%
San Mateo	0.37%	0.40%	0.34%	0.38%	0.38%	1.38%	1.39%
Santa Clara	0.38%	0.39%	0.35%	0.37%	0.38%	1.36%	1.38%
Solano	0.37%	0.37%	0.33%	0.36%	0.36%	1.34%	1.36%
Sonoma	0.37%	0.37%	0.33%	0.38%	0.39%	1.44%	1.45%
Bay Area	0.58%	0.54%	0.44%	0.48%	0.49%	1.32%	1.35%

ACS completed household sample interviews can be roughly compared to Census 2000 Summary File 3 (SF3) – that is, the long form – values for “percent of population in sample”.

**Percent of Census 2000 SF3 Population in Sample  
Bay Area Counties, 2000**

County	Census 2000
Alameda	12.9%
Contra Costa	13.0%
Marin	13.4%
Napa	13.0%
San Francisco	11.7%
San Mateo	13.5%
Santa Clara	12.9%
Solano	12.6%
Sonoma	13.3%
Bay Area	12.9%

Sample sizes vary by county, but region-wide the sampling rate of ACS 2006 is approximately one-tenth that of Census 2000. Due to its smaller samples sizes, the Census Bureau publishes the “margin of error” with ACS estimates to account for errors in the data associated with sampling, collectively called “sampling error”.

Both Census 2000 SF3 and ACS 2006 data are sample estimates (not a 100-percent count, like Census 2000 Summary File 1), and are therefore subject to sampling error. Because of the larger sample size (and reduced sampling error) associated with Census 2000, the Census Bureau chose not to publish sampling error with the estimates for that

data set. Sampling error for SF3 data, however, does exist and can be calculated using methods described in the Census 2000 Summary File 3 Technical Documentation, Chapter 8, “Accuracy of the Data”.

Errors in accuracy associated with sampling for Census 2000 and ACS 2006 arise from two sources. The first is non-sampling error, including editing, reviewing or keying data. This type of error is difficult to quantify and the Census Bureau does not attempt to do so. The second source of error, that associated with probability sampling methods used to form sample estimates, relies on statistical sampling and analysis procedures to insure the integrity and representativeness of survey results. As such, this type of error can be measured.

The concept of a “standard error” is utilized to measure the deviation of a particular sample estimate from the average of all possible estimates. The Census Bureau uses sample estimates and their estimated standard error to report a 90-percent margin of error that includes the average result of all possible samples.

The standard error is larger, and the margin of error wider (as a percentage of the estimate), for geographic areas with smaller populations and for characteristics that occur less frequently in the area of interest. For example, sample estimates for San Francisco will have a larger margin of error (again, as a percentage of the estimate) than will the State of California for the same characteristic. Similarly, as a means of transportation to work, bicycling will have a relatively larger margin of error than drive alone, because of its less frequent occurrence in the characteristic of interest.

The margin of error associated with estimates utilizes a “normal curve” in understanding the statistical relationship between a sample estimate and the “true value” of the characteristic of interest. Statistically speaking, the central value, or sample estimate, has a much higher probability of representing the true value of the measured characteristic than do the values at either end of the margin of error. So, while the true value of the measured characteristic lies somewhere within the margin of error, it is more likely to be closer to the central estimate than at one of the ends of the sampling distribution.

In most cases, tabulations in this report have the margins of error excluded for brevity and clarity. However, when comparing sample estimates between years it is important to note that, while values may appear different, only statistical analysis can determine whether these differences are truly meaningful, or “significant”.

As a final note in this section, it is important to mention that, while ACS data has higher sampling errors than Census 2000, it is widely believed that non-sampling errors (for example, the collection, inputting, and editing of data) are substantially reduced in the ACS program. This is largely due to a full-time enumerator staff, improved sampling instruments, and an improved non-response follow-up procedure associated with ACS.

## **B. Sample Universe**

As noted above, the ACS 2006 is the first American Community Survey dataset to include group quarters samples. Direct comparisons of ACS 2006 to Census 2000 are

possible. In contrast, the ACS 2005 dataset did not include group quarters sample, so only household characteristics (e.g., vehicle availability, vacancy rates, etc.) can be used when comparing ACS 2005 to ACS 2006.

### C. Geographic Areas to be Included in Three-Year ACS Products

The first three-year period estimates from the American Community Survey will be based on all data collected between 2005 and 2007. The first three-year data product is anticipated for release in fall 2008. Data for three-year ACS products will be based on geographic areas of 20,000+ total population (including all of the large areas of 65,000+ population). For the Bay Area, this will provide data for 39 additional cities, and 4 census designated places:

City Name	Total Population as of 7/1/2006	City Name	Total Population as of 7/1/2006
Belmont	24,665	Oakley	28,822
Benicia	26,597	Pacifica	37,327
Brentwood	47,547	Palo Alto	57,809
Burlingame	27,573	Petaluma	54,660
Campbell	37,520	Pittsburg	63,017
Cupertino	52,948	Pleasant Hill	33,191
Danville	41,540	Rohnert Park	41,083
Dublin	41,840	San Bruno	39,986
East Palo Alto	32,784	San Carlos	27,002
El Cerrito	22,600	San Pablo	31,044
Foster City	28,937	San Rafael	56,008
Gilroy	48,313	San Ramon	49,589
Lafayette	24,877	Saratoga	30,045
Los Altos	27,483	South San Francisco	61,354
Los Gatos	28,366	Suisun City	26,917
Martinez	35,593	Walnut Creek	63,701
Menlo Park	29,981	Windsor	25,294
Millbrae	20,461	Castro Valley CDP	57,292*
Milpitas	64,292	San Lorenzo CDP	21,898*
Morgan Hill	35,982	Bay Point CDP	21,534*
Newark	41,891	Ashland CDP	20,793*
Novato	51,518	* Census 2000 Total Population	

## **II. DATA AVAILABILITY AND CONTACT INFORMATION**

This data summary was written in Microsoft WORD, version 2000. The data tables are Microsoft EXCEL workbooks, also version 2000. These WORD and EXCEL files are available for downloading from MTC's Internet site, as are additional electronic appendices:

[ftp://ftp.abag.ca.gov/pub/mtc/census2000/ACS/ACS2006\\_Summary](ftp://ftp.abag.ca.gov/pub/mtc/census2000/ACS/ACS2006_Summary)

The general Census 2000 Internet site maintained by MTC and the Association of Bay Area Governments (ABAG) is available at:

<http://www.bayareacensus.ca.gov/>

These sites are updated on an ongoing basis to include various maps, databases, profile summary reports and other items of interest to the census data user.

The data user also may want to investigate the Census Bureau's American FactFinder to find other detailed Census 2000 and American Community Survey results:

<http://factfinder.census.gov/>

For more information on this data summary or other American Community Survey or Census 2000 issues, please contact the MTC census analysis staff: Mr. Chuck Purvis, at 510-817-5755 (e-mail: [cpurvis@mtc.ca.gov](mailto:cpurvis@mtc.ca.gov)), or Mr. Shimon Israel, at 510-817-5839 (e-mail: [sisrael@mtc.ca.gov](mailto:sisrael@mtc.ca.gov)).

## **III. ENDNOTES**

The "diversity index" included in this data summary is an "entropy index". The measure is taken from California State University Northridge geographers James Allen and Gene Turner, from their book, "The Ethnic Quilt: Population Diversity in Southern California" (1997). Allen and Turner use the entropy index discussed by Michael White in the article "Segregation and Diversity Measure in Population Distribution", in "Population Index" 52:2, Summer, 1986, pp. 198-221.

The diversity index in this report is based on five racial/ethnic categories: white; black or African American; Asian or Pacific Islander; Hispanic/Latino; and other races (American Indian, Alaskan Native, some other race, and two-or-more races).

In calculating the racial/ethnic diversity index, the proportion of each of the five groups is first calculated. A perfectly diverse community would have 20% in each group, or a proportion of 0.20.

Next, multiply the proportion by the natural logarithm of that proportion, for example, if the proportion is 0.15, then  $0.15 * \ln(0.15)$  is -0.284567.

Note that the natural log of zero is undefined, so would need to catch this in a conditional statement in Excel:  $A2=\text{if}(A1=0,0,A1*\ln(A1))$ . (If the proportion in A1 is zero, then zero, else multiply A1 by the natural log of A1.)

Sum these products up. An example is:

15% white= $0.15*\ln(0.15)=-0.28457$   
25% black= $0.25*\ln(0.25)=-0.34657$   
30% Hispanic= $0.30*\ln(0.30)=-0.36119$   
25% Asian/PI= $0.25*\ln(0.25)=-0.34657$   
5% other= $0.05*\ln(0.05)=-0.14979$   
sum= $-1.48869$

Now, divide this sum by  $-1.609$ . For this example, a diversity index of 0.925 is calculated.

The  $-1.609$  denominator is based on  $5*0.20*\ln(0.20)$ .

There are other measures of diversity, but this measure is preferable because it ranges from an index of 0.0 (100 percent in one race category) to 1.0 (equal share among all groups).

**Table A.1****Housing Units, Households, Household Population****County and Place of Residence over 65,000 Population: 2000, 2005, and 2006**

County or Place	Housing Units			Households			Household Population		
	2000	2005	2006	2000	2005	2006	2000	2005	2006

	Median	~\$62,024	~\$75,235	~\$70,717	-8.5%

Notes: Tabulation prepared by MTC Staff based on data from Census 2000 Summary File 3 (Tables P13, P53, and P54), and the American Community Survey 2006 (Tables B11001, B19013, and B19025).

2000 Census household income values are inflated to ACS 2006 values by using the ratio of the Consumer Price indices (CPI-U) for the San Francisco Bay Area, 2006 to 1999 ( $209.2 / 172.5 = 1.213$ ).

~Year 2000 value is the median income for the ten-county CMSA, including the nine-county Bay Area and Santa Cruz County. The year 2006 value is the median income for the eleven-county CSA, including the nine-county Bay Area and Santa Cruz and San Benito Counties.

2006	% of Tot.	4.6%	5.1%	6.8%	6.6%	77.0%	100.0%

Notes: Tabulation prepared by MTC Staff based on data from Census 2000 Summary File 3 (Table P88), and the American Community Survey 2006 (Table B17002).

Poverty status was determined for all people except institutionalized people, people in military group quarters, people in college dormitories, and unrelated individuals under 15 years old. These groups are considered neither "poor" nor "non-poor", and were excluded from the numerator and denominator when calculating poverty rates. Thus, the total population in poverty tables - the poverty universe - is slightly smaller than the overall population.

Table C.6: Housing Cost Burdened Households (>30% of Income on Housing Costs): 1990, 2000-2006  
 San Francisco Bay Area, California, and United States  
 1990-2000 Censuses, Census 2000-2001 Supplementary Surveys and the American Community Survey 2002-2006

Tabulation prepared by MTC Staff based on data from the 1990 Summary Tape File 3 (Tables H051 and H058), Census 2000 Summary File 3 (Tables H067 and H088), and the American Community Survey 2004-2006 (Tables B25070 and B25091).

\*Housing unit universes differ between years. For tabulated data 1990-2003, the universe includes only "specified" renter- and owner-occupied housing units, while 2004-2006 include the full renter- and owner-occupied universe. "Specified renter" housing units exclude single-family houses on 10 acres or more.

"Specified owner" housing units include only single-family houses on less than 10 acres without a business or medical office on the property. The data for "specified units" exclude mobile homes, houses with a business or medical office on 10 or more acres, and owned housing units in multifamily buildings.

Notes: Tabulation prepared by MTC Staff based on data from Census 2000 Summary File 3 (Tables H69 and H94), and the American Community Survey 2006 (Tables B25070 and B25091).

Housing unit universes differ between years. For 2000, the universe includes only "specified" renter- and owner-occupied housing units, while the 2006 universe includes the full renter- and owner-occupied universe. "Specified renter" housing units exclude single-family houses on 10 acres or more. "Specified owner" housing units include only single-family houses on less than 10 acres without a business or medical office on the property. The data for "specified units" exclude mobile homes, houses with a business or medical office, houses on 10 or more acres, and owned housing units in multiunit buildings.

The difference between "specified units" in Census 2000 (2,251,032 in the Bay Area) and "total households" in Census 2000 (2,466,019) is 214,987 households.

Notes: Tabulation prepared by MTC Staff based on data from Census 2000 Summary File 3 (Tables H63, H70, H91, and H95), and the American Community Survey 2006 (Tables B25064, B25071, B25088 and B25092).

~Year 2000 value is the median income for the ten-county CMSA, including the nine-county Bay Area and Santa Cruz County. The year 2006 value is the median income for the eleven-county CSA, including the nine-county Bay Area and Santa Cruz and San Benito Counties.

Housing unit universes differ between years. For 2000, the universe includes only "specified" renter- and owner-occupied housing units, while the 2006 universe includes the full renter- and owner-occupied universe. "Specified renter" housing units exclude single-family houses on 10 acres or more. "Specified owner" housing units include only single-family houses on less than 10 acres without a business or medical office on the property. The data for "specified units" exclude mobile homes, houses with a business or medical office, houses on 10 or more acres, and owned housing units in multifamily buildings.

Asian includes single-race asian, non-hispanic. Persons reporting Asian and any other race are included in the category "other". The "other" category includes: American Indian / Alaskan Native; Native Hawaiian or Other Pacific Islander; Other; and persons or two-or-more races.

**Table F.5**  
**The Cost of Housing: United States, California, the Bay Area**  
**American Community Survey 2006**

***Median Housing Costs***

	Monthly Ownership Costs	Median Gross Rent
Bay Area	\$2,620	\$1,180
California	\$2,142	\$1,029
United States	\$1,402	\$763

***Median Housing Costs as a Percent of Income***

	Monthly Ownership Costs as a Percent of Income	Median Gross Rent as a Percent of Income
Bay Area	31.2%	30.2%
California	31.0%	32.4%
United States	24.9%	29.9%

*Notes:*

*Selected Monthly Ownership Costs (SMOC) (for owner households) includes: mortgages, real estate taxes, various insurances, utilities, fuels, mobile home costs, and condominium fees.*

*Gross rent (for renter households) is the amount of the contract rent plus the estimated average monthly cost of utilities (electricity, gas, and water and sewer) and fuels (oil, coal, kerosene, wood, etc.) if these are paid for by the renter (or paid for the renter by someone else).*

## **Footnotes on Tables G.1 - G.13**

Table G.1. Total Population (Table B01003); Households by Tenure (Table B25003); Household Population and Group Quarters Population (Table C09006); Population Age 65+ (Table B01001)

Table G.2. Population by Race/Ethnicity (Table C03002)

Table G.3 Burdened Renter/Owner households is a MTC term to denote renter households spending 30 percent or of household income on housing costs (see footnote for Table G.4). Data for renter households is from Table B25070. Data for owner-occupied households is from Table B25091.

Table G.4. Median Gross Rent (Table B25064); Median Gross Rent as a Percent of Income (Table B25071); Median Selected Monthly Owner Costs (table B25088); Median SMOC as a Percent of Income (table B25092). Selected monthly owner costs are calculated from the sum of payment for mortgages, real estate taxes, various insurances, utilities, fuels, mobile home costs, and condominium fees. Listing the items separately improves accuracy and provides additional detail. When combined with income, a new item is created - Selected Monthly Owner Costs as a Percentage of Household Income. This item is used to measure housing affordability and excessive shelter costs. For example, many government agencies define excessive as costs that exceed 30 percent of household income. Gross rent is the amount of the contract rent plus the estimated average monthly cost of utilities (electricity, gas, and water and sewer) and fuels (oil, coal, kerosene, wood, etc.) if these are paid for by the renter (or paid for the renter by someone else).

Table G.5. School Enrollment is from Table B14001.

Table G.6. Linguistically isolated households is from Table B16002. A household in which no person 14 years old and over speaks only English and no person 14 years old and over who speaks a language other than English speaks English "Very well" is classified as "linguistically isolated." In other words, a household in which all members 14 years old and over speak a non-English language and also speak English less than "Very well" (have difficulty with English) is "linguistically isolated." All the members of a linguistically isolated household are tabulated as linguistically isolated, including members under 14 years old who may speak only English. Limited english proficiency is from Table C16004. This is from the "ability to speak english" question, and includes persons reporting speaking english "not at all" or "not well."

Table G.7. Residential mobility for owner-occupied households is from Table B25038.

Table G.8. Residential mobility for renter-occupied households is from Table B25038.

Table G.9, 10. Means of transportation to work is from Table C08006.

Table G.11. Workers by Travel Time to Work is from Table B08012.

Table G.12. Mean travel time to work is derived from Aggregate Travel Time to Work (table B08013) divided by total non-home workers from table C08006.  
Intra-county commuters is from Table C08007.

Table G.13. Households by vehicle availability is from Table C25045. Total aggregate number of household vehicles is from Table B25046.
